West Manhood Drainage Improvement Group

The Common to the South of Shipton green Lane has some large pond areas and ditches that cannot be accessed for clearing without removal of much undergrowth and trees. Some of these were planted to screen the substation and a previous caravan. Much is wild. I am suggesting that trees are cleared where required to open up and maintain the ditch network allowing the field land drains to work.
Sililarly for the trees and bushes screening the pond in front of Shipton Mead. This area is now being used for tipping grass.
Will the PC resolve to do this.
