Foul Drain overview
Southern Water - Blockages have been reported at the ‘Trees’ pumping station

Rainwater overview
The Pond - The attenuation bund is working successfully to store flood water. Landbuild have withdrawn from Quoting for the dredging due to problems with disposal of the silt. New specialists will be invited to tender using the survey data.

Operation Watershed - The road culverts that are considered to be problems have now been surveyed and the report just received. A summary will be issued with proposals. The full report is available with DVD for viewing.

Storm water is still being held back in many locations where Riparian owners have not de silted ditches.

The Rife and sea wall
Recent storms Have brought the sea over the top of the Wall.
No responses have been received from the EA to earlier questions.

No residents have come forward with any proposals for managing the Rife as a group.

Trees and verges
More work is needed to cut back hedges and trees that have grown over the verges and concealed the ditches.

Mapping
Updates have not been requested this year pending decisions on the further road culvert works to be undertaken.
