WIPC Environmental Report - March 2024

Pond - continues to do its job as an attenuation facility. Vegetation starting to regrow with the Hemlock Water Dropwort being the main invasive plant to remove.

Verges - continue to be broken down by tractors, large lorries and other delivery vehicles during this wet weather. Once the dry weather returns the erosion that has occurred is unlikely to be repaired in most cases.

Common - Tim Keen has cleared an area at Shipton Green for the planting of some specimen trees. He has also increased the areas for wild flower sowing. The trees and those for replacement at 'Church Field' will be planted as soon as the suppler gives us a date.
